## Swift, and Simple Operation

- Truck arrives at destination.
- Body is unlocked, system is lifted, and legs are set to desired height.
- System is lowered and truck is free to pull away.
- Body stands on legs to be loaded or unloaded.

## Truck•Tainer™

Demountable Truck Body Systems

All TruckTainer demountable systems are designed to be swift and simple to operate.

A guiding system and hydraulic lift system make mounting and demounting bodies a simple, safe, one person operation.

TruckTainer demountable systems keep the chassis and driver moving. By loading bodies in advance, operators are able to reduce warehouse costs, including overtime and the need for additional power units.

Over center hooks secure body to truck and provide a swift and safe locking system. The locking system also includes a cab mounted safety warning device.
